#	Problem Statement	Remarks
1	<p>Public Toilet Locator</p> <p>In the city of Surat there are number of public toilets. It is required to develop a mobile app which will enable the citizen to locate the nearest toilet along with its rating. Various features related to a specific public toilet whether it is free or chargeable; facility for male, female, handicap; etc. should be available to citizen. Using the app citizen should be able to report the health of public toilet on various parameters like the cleanliness, water leakage, water availability, issue with sanitary ware, etc. This app would help authority to get the direct and authentic feedback from the end user and will enable to take corrective actions.</p>	<p>Data required</p> <ul style="list-style-type: none"> - Locations of Public Toilets - Details of facility available - Free or Chargeable and charge details - Rating parameters
